Monthly Summary

The NAV of CERVINO (I) went up by 3.1% during May (share class I). In 2026 the accumulated return is 6.2% which represents 227,3% since inception, and a CAGR of 7,0%.

Following the extreme volatility witnessed in previous months, global financial markets have entered a phase of adjustment to heightened geopolitical risks. Global equities gained 4.3% during the month (MSCI World), led by the U.S., where the S&P 500 advanced 5.1% and pushed to fresh all-time highs above the 7,500 level. European equities also moved higher, rising 2.5%, although they remain below the peaks reached prior to the Iran conflict.

Despite oil prices remaining elevated and the Strait of Hormuz disruption extending beyond three months, investors have largely looked through its potential implications for inflation and economic growth. Longer-dated bond yields, however, continue to reflect a degree of concern, incorporating the impact of higher energy costs and rising global shipping rates.

Against this backdrop, equity markets continue to find support in remarkably resilient corporate fundamentals. First-quarter earnings season concluded with aggregate S&P 500 earnings growth exceeding 30%, while consensus estimates now project earnings growth of 24% for 2026. As a result, despite the strong market rally, valuations appear more attractive today than they did before the outbreak of the conflict. Meanwhile, the Xi-Trump summit in Beijing, despite producing little of substance, failed to disrupt the advance in risk assets.

On the monetary front, the key development of the month was the leadership transition at the Federal Reserve. Kevin Warsh officially succeeded Jerome Powell as Chair of the Fed. While investors had anticipated a more hawkish policy stance, his initial remarks have instead reinforced a broadly cautious, wait-and-see approach toward what are still viewed as transitory inflation pressures.

Above all, the Artificial Intelligence investment theme continues to dominate market leadership. While the momentum of several Asian technology indices and semiconductor manufacturers has moderated following their extraordinary gains in previous months, the broader AI ecosystem—including semiconductors, infrastructure and data-center beneficiaries—continues to demonstrate exceptional strength. Few investors are willing to be underexposed to what is arguably the defining investment theme of the decade, and against that backdrop even disruptions to global energy trade have faded into the background.

Performance across the portfolio reflected this dynamic. More than a dozen holdings generated returns above 10% during the month, led by Nebius (+67%), First Solar (+52%), Cisco and Syensqo (+21%). On the downside, over twenty positions finished the month in negative territory, with the Antolín bond (-26%), Roblox (-14%), Disco (-13%) and PayPal (-10%) among the weakest performers.

Turning to portfolio activity, we increased equity exposure during May through additional purchases of Microsoft and Berkshire Hathaway. We also raised our indirect exposure to China, a market that has significantly lagged global peers in recent weeks. Finally, we initiated a position in Oxford Instruments, a leading provider of high-precision equipment for the semiconductor industry, well positioned to benefit from growing demand for advanced semiconductor materials and the ongoing expansion of global data-center infrastructure.
